TiGLON

Magnesium Shield Cable

Try our audio cables that employ our world first and patented magnesium shielding technology.

"Magnetic Shield" Pat. No. 4282759

Magnesium is prominent in vibrational absorption and electromagnetic shielding. TiGLON developed its original magnesium foil having most distinguished audio characteristics to work as an ideal shielding layer which removes external noise influence to the utmost limit.

MGL-R1

Magnesium Interconnects Cable

Top of the line interconnects from TiGLON, 500 ultra fine soft copper wires, each 50 micron in diameter, stranded in one conductor; total two conductors. Triple layered shields of copper braid, magnesium, and copper braid, are employed. Terminated with magnesium RCA plug for MGL-R1 and magnesium filter to infinitely shut off external electro magnetic waves and vibration noises. Maximizing the characteristics of magnesium, TiGLON has achieved high dimensional transparency and low sound-to-noise feeling.
